Course Analysis for MATB23 Analysis in Several Variables 2, Fall 2022

Course Information

Lecturer: Yacin Ameur

Teaching assistants: Alex Bergman

Number of students:

13 newly registered and 18 re-registered.

3 students answered the course evaluation, 2 of them are enrolled on the Bachelor's Programme in Mathematics and 1 on the Bachelor's Programme in Physics.

Examination

Oral examination: 15 students passed.

Written examination: 13 students passed.

- Ordinary examination 20/12 2022: 23 students participated and 9 of them passed.

- Resit examination 10/1 2023: 12 students participated and 6 of them passed.

Final grades:

In all, 15 students, including 4 re-registered students, have got their final grade.

3 passed with distinction.

12 passed.

Course Evaluation

Summary of student's answers:

See attached summary.

Teachers' comments:

The education consists of lectures and seminars.

Changes from the previous course realisation:

No big changes. Some moments such as implicit function theorem are skipped because of insufficient time. Alex does a good job managing the exercise classes.

Suggestions for the next course realisation:

The biggest current problem is that other teachers have started experimenting with the course literature for MATB21, apparently without considering the impact of such changes for MATB23.

This practice should be stopped, if we are to continue having separate teachers for the two courses (MATB21 and MATB23). Ideally, one and the same teacher would have both courses.

The course is also a little too crammed with too much scheduled education. The students do not have time to prepare exercises during weeks when there are three lectures. Also the course continues too long with examination on December 20, which means that oral exams must be postponed until after new year's eve.

What did you appreciate most with the course?

What did you appreciate most with the course?
just SEMINARS
Nothing

What do you think should be improved?

What do you think should be improved?

The exam was difficult and it was not similar to problems that we solved in seminars.

There are a lot of things that should be improved: For example the lecturer should not put stuff in the course which actually belongs to several variables 2 so that students who passed several variables 1 for a while ago and did the moment in question, have to do it again. Because they have already shown they can handle that part.

Secondly, it is sad that you don't get help during the seminars when you ask question which you wish help in and the person says "I don't know" without trying to help you solve the question.
