# Course Analysis for MATM30 Mathematical Foundations of Probability, Autumn 2024

## Course Information

**Lecturer:** Tatyana Turova

**Number of students:**

17 newly registered.

4 students answered the course evaluation.

## Examination

**Oral examination:** 9 students passed.

**Final grades:**

In all, 9 students have got their final grade.

4 passed with distinction.

5 passed.

## Course Evaluation

**Summary of student's answers:**

Overall, the students are very positive about the course.

It is always assumed that the students work first on the problems at home. The students confirm that they increased their ability to communicate the subject orally, to solve the problems.

**Teachers' comments:**

Overwhelming majority of students appreciate the lectures, as well as the conductance of the seminars where the theory is vividly discussed.

It is always assumed that the students work first on the problems at home. The course is given very close to the textbook, but with extra details sometimes. The students certainly appreciate an opportunity to discuss questions somewhat outside of the book as well. The exercises are from the book, and each problem is solved in class at the blackboard. The oral examination is a good part of the educational process as well. All the students are given an opportunity to improve the grade should they want to.

**Changes from the previous course realisation:**

The past evaluations were positive. Therefore, when compared to the previous course realisation in 2023, no real changes in the structure were made.

**Suggestions for the next course realisation:**

The evaluations for 2024 are also very positive. Therefore, no major changes in the structure are planned.

Given a positive result with this course the administration may consider implementing a following course in Stochastic processes within a graduate program in mathematics at LU. I believe this should attract a sufficient number of students.

In case there are students interested I am always ready to have extra meetings for discussing more probability projects.

The students attending this course have a very different background in mathematics. The students without proper mathematical training could be advised to take another course in probability first (e.g., MASC01).
