Report on "Specialised course in Integration Theory", MATP29, Spring 2020

Due to the beginning of pandemia, the regular plan which was based on lectures and seminars in class, has been changed and turned into a reading course. As a teaching method, I have divided the material into lectures and provided to each of them additional notes which aimed to explain the intuition behind the results as well as the main ideas used in the proofs. In addition, I scheduled a weakly zoom-meeting to answer questions and discuss solutions of the assigned exercises. There were 11 registered students, 4 of them participated actively in the zoom meetings and 3 took the take-home exam which they all passed with VG.

As expected, this new and somewhat ad-hoc method had a relatively strong impact on the students. Only one of them filled in the evaluation form, and had a number of positive inputs. Nevertheless, these opinions also express a preference for zoom lectures, which I completely agree to, especially in view of the experience I gathered during the courses following this one. The book, as well as the additional material I provided seem to be appreciated by this student.

What did you appreciate most with the course?

What did you appreciate most with the course?
The material has been nice, especially Chapter 4 and the Hardy-Littlewood sections. I appreciated the weekly meetings and the ability to ask questions directly.

What do you think should be improved?

What do you think should be improved?
I had a hard time digesting some of the things in Chapter 6 and didn't find the material there very engaging. Of course due to the circumstances examination was hard to predict but I think that it could have been nice to have had some sort of hand ins/assignments during the course. It of course requires more effort but I personally enjoy having "real time" lectures over zoom because it makes it easier to engage deeper with the material but I realize this is meant more as a self study course compared to earlier courses.
On another note I think the workload was rather light compared to other 7.5 credit courses I have taken. This because there was no need to memorize all of the proofs.

Have you during this course experienced course literature, staff or teaching methods to be discriminatory in any way (gender, ethnicity, etc.)?
