

Kurssammanställning NUMN24 "Numerisk analys: Finita volymmetoder" vt 2021

Course responsible: Philipp Birken

Other teachers: -

Number of students: 1 registered students

Grades: 0 UK, 0 G.

Evaluation

I. Summary of Course Evaluation

Total number of answers: 0

Short summary of the result: Given that there was only one student, which dropped out during the course, no course evaluation was made.
This course was taught purely online.

II. Evaluation of changes since last time the course was given

The course was given online, and we started using the open source PDE software framework DUNE within the course, with the help of Robert Klöfkorn. This worked well.

III. Proposed changes to the next time the course is given

The number of students remains low, as in the course on iterative methods. It was therefore decided to not give the course again, and instead replace both this one the the iterative solvers course with a new course, Numerisk analys: Numeriska simuleringar av flödesproblem, NUMN28, which will be given yearly, instead of the two periodicised courses.
